NATURAL PHARMACEUTICALS

Lion's Mane with Bacopa Monnieri and Ginkgo Biloba

PREMIUM
3-IN-1
FORMULATION

TRADITIONAL USES

- Neural Regeneration
- Memory
- Attention Span
- Anti-Aging
- Heart Health
- Gut Health
- Cognitive Function
- Concentration
- Oxygen Supply
- Headaches
- Dizziness
- Sexual Stamina
- Synaptic Plasticity
- Nerve Function
- Circulatory Health
- Energy
- Eye Health
- Tinnitus

CHEMISTRY AND PHARMACOLOGICAL RESEARCH

Lion's Mane This superfood mushroom contains a range of bioactive compounds, including polysaccharides, hericenones, and erinacines. Its remarkable properties make it a valuable tool in supporting the growth, regeneration, and function of neurons, thereby enhancing, and restoring optimal cognitive function. Students and executives frequently turn to this mushroom to improve their focus, memory, learning ability, and concentration span. Individuals experiencing cognitive decline, dementia, or Alzheimer's have found solace in this superfood due to its neural regenerative and synaptic plasticity properties. These properties arise from its ability to stimulate the production of nerve growth factor (NGF), a crucial protein that supports a well-functioning nervous system. NGF promotes the growth of axons, which are responsible for transmitting signals to other cells. It has shown to also impact the circulatory system positively, leading to improved cerebral circulation and enhanced oxygen and nutrient supply to the entire nervous system. This comprehensive effect contributes to an overall boost in vitality and cardiovascular health. It has shown potential in managing blood sugar levels and enhancing glucose metabolism, demonstrating hypoglycaemic effects. Its antioxidant and anti-inflammatory properties have positive implications for gastrointestinal health, aiding in the treatment of stomach ulcers and gastritis. Its ability to combat free radicals highlights its impressive anti-aging properties.

Bacopa Monnieri Extract 20% Bacopa, a medicinal herb, has gained attention for its scientific research supporting its role in improving cognitive function, memory, concentration, and attention span. Studies have shown that its extracts contain active compounds such as bacosides, which have neuroprotective effects and enhance synaptic transmission. These mechanisms contribute to improved cognitive function and memory formation. It has demonstrated the ability to enhance learning and memory processes by increasing the release of acetylcholine, a neurotransmitter involved in memory and learning. Moreover, it has shown promise in assisting individuals with attention deficit hyperactivity disorder (ADHD) due to its ability to improve attention, focus, and impulse control in both children and adults. Its positive effects on ADHD symptoms are attributed to its modulation of neurotransmitters like dopamine and serotonin, which play critical roles in attention regulation and mood. It has been investigated in managing epilepsy due to its anti-convulsive properties. Studies have shown that its extracts can reduce seizure activity and exert a neuroprotective effect on the brain.

Ginkgo Biloba 50:1 Extract 24/6% Ginkgo Biloba contributes to increased vitality and overall well-being. It enhances blood flow and oxygen delivery to various organs, including the brain, resulting in improved energy levels and mental clarity. It has shown to alleviate dizziness, headaches, and migraines due to its ability to enhance blood flow and reduce inflammation, modulating the release of certain chemicals in the brain that are involved in pain perception, providing relief. Due to this improved blood flow & circulation in the ears, it has been seen to alleviate ringing or buzzing sounds associated with tinnitus & help reduce dizziness while enhancing balance. Its antioxidant properties and its ability to improve blood flow also make it beneficial for eye health by reducing oxidative stress and supporting circulation to the eyes, it helps maintain healthy vision and protect against age-related eye conditions. It is known to enhance sexual stamina and libido due to enhancing blood flow to the genital area, supporting sexual function and performance.
